„In winter, I spend most of my time on touring skis. I love combining fitness training with a great ride. And in the summer months, I enjoy alpine climbing. I always end up in such amazing situations.“

BIANCA SCHÖFERLE can be found either climbing up steep limestone rock or making tracks through fresh powder snow — but always with the ultra-light, easy to use Guide Lite 22 SL on her back.

360° Corporate Responsibility at Deuter

Social responsibility and environmental protection are deeply embedded in the Deuter company ethos. It's part of who we are and guides our daily efforts.

360° means achieving sustainability from the very start of a product's life – from the selection of materials and the manufacturing of our high-quality products together with our established partners – right the way through to our repairs service. We take a holistic approach to product development and are full accountable for our supply chain.

We are supported along the way through our collaboration with sustainability initiatives and the application of recognized standards.

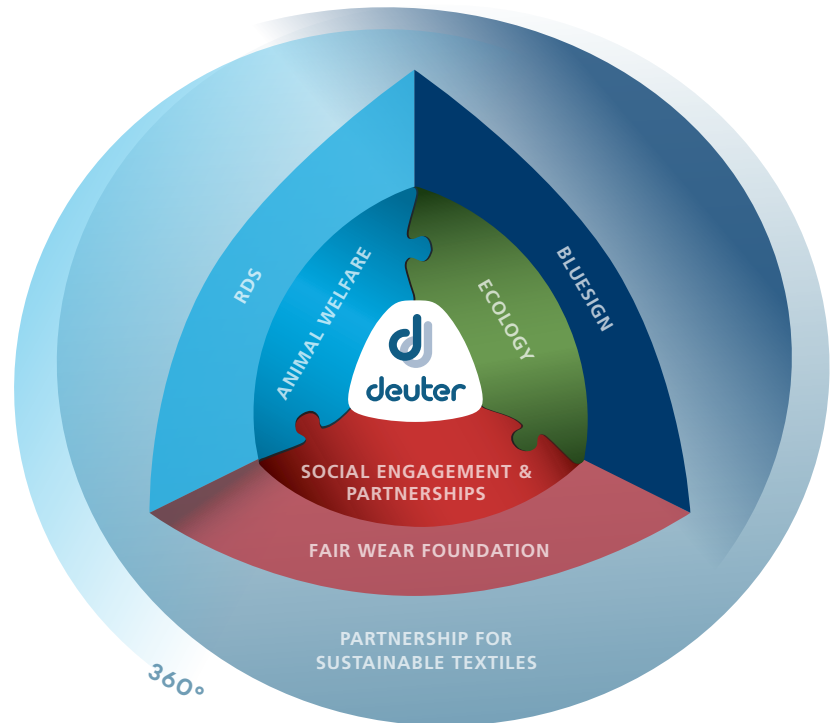

Mitglied im Bündnis
für nachhaltige Textilien

Sozial und ökologisch – wir sind auf dem Weg

DEUTER HAS BEEN A MEMBER OF THE PARTNERSHIP FOR SUSTAINABLE TEXTILES SINCE JUNE 2015.

The partnership is an initiative set up by the German government in October 2014. Its members from business and civil society, standards organisations and trade unions have set out to improve the social, environmental and economic conditions throughout the textile supply chain. For more information visit: www.textilbuenndnis.com

CORPORATE RESPONSIBILITY

FAIR WEAR FOUNDATION

FWF (Fair Wear Foundation) is an independent multi-stakeholder initiative that works together with brands and manufacturers. Its aim is to improve working conditions throughout the textile and apparel industry, especially locally, in manufacturing countries. Deuter has been a member of the FWF since August 2011 and has committed to its strict working guidelines. FWF has recognised this commitment and granted Deuter 'Leader Status' for several years in a row.

- long-standing partnership with just two suppliers
- FWF Leader Status since 2013
- FWF Best Practice award 2015

BLUESIGN®

The bluesign® system is the world's strictest standard for environmental protection, occupational safety and consumer protection throughout the textile industry. As part of the bluesign® system partnership since 2008, we are actively working to make our products and the entire supply chain more resource-efficient and environmentally friendly: from the design right through to delivery.

- 100 % T1-supplier (direct production partners) bluesign® systems partner
- bluesign® products: ASTRO-series, Kikki

RESPONSIBLE DOWN STANDARD

To be Responsible Down Standard (RDS) certified, the entire supply chain must be fully traceable – from the chicks to the finished sleeping bag – and the strictest animal welfare standards upheld. And so, to ensure that species-appropriate rearing procedures and animal welfare standards are sustained throughout our supply chain, since June 2015 we've exclusively used down and feathers from certified suppliers.

WHERE ARE DEUTER PRODUCTS MANUFACTURED?

It takes a lot of experience and skill to guarantee such high standards in quality and durability – and consequently a skilled team of experienced, driven employees. That's why Deuter only works with two long-standing manufacturing partners. All of our backpacks, bags and accessories are made in Vietnam, where our partner Duke, has exclusively manufactured for us, across three factories, since 1994. Bellmart, has manufactured all our sleeping bags since 2003. Bellmart makes our down sleeping bags in China, while our synthetic sleeping bags are made at its site in Myanmar.

DEUTER PROMISE

At Deuter, we stand by the quality of our products and are committed to sustainability. This commitment starts with product development and does not, however, end with the sale of our products. That's why we give our customers the 'Deuter Promise' of worldwide, lifelong repairs to their much-loved gear. For more information, visit our web pages:

www.deuter.com/promise

REPAIR SERVICE

Our responsibility does not end with the sale of our products. We are proud of the fact that Deuter products are known for their durability. And through our repair service, we extend the working life of our products as much as possible.

ALL DEUTER PRODUCTS WILL BE PFC-FREE FROM SUMMER 2020!

AWAY FROM PFCS – TOWARDS MORE ENVIRONMENTALLY FRIENDLY IMPREGNATION

'PFC-free' is everywhere at the moment. But what exactly are PFCs?

PFC (perfluorinated and polyfluorinated compounds) are a group of chemicals that are harmful to the environment and to our health. These chemicals are found in a wide range of everyday items such as kitchenware, pizza boxes, paper and also textiles like rain jackets. Once released into the environment, they disperse extensively. Scientists have found traces of PFCs in drinking water, air, blood, polar bears and in breast milk. Some PFCs can even have a detrimental effect on reproduction and cause cancer. Harmful fluorocarbons degrade extremely slowly - over several hundred years - if at all.

So why are PFCs used?

PFCs are used because of their water, dirt and grease repellent properties and are therefore also used in breathable membranes. PFCs are particularly popular in the outdoor trade as a means for impregnating textiles. Without a water repellent coating, fabrics would soak up water and become heavy and wet.

Deuter impregnate in an environmentally sound way by...

Deuter has pledged to make all of its products fully free from fluorocarbons (PFCs) that are harmful to people and the planet, but without compromising on functionality. This presented a huge challenge for Deuter. For a long time now, there has been no comparable alternative to these perfluorinated chemicals.

It was only when Greenpeace launched its "Detox My Fashion" campaign in 2012 that suppliers and the chemicals industry as a whole started to work on alternative, environmentally friendly ways of making textiles waterproof. Several outdoor brands, including Deuter, were quick to react.

To ensure water and dirt repellent performance, Deuter now only uses DWR (Durable Water Repellent) treatments that are fully free from PFCs and not harmful to people's health or the environment. This special kind of coating causes water to bead off the outer surface of textiles to keep the product dry. By using this method, Deuter is making good progress towards its goal of ensuring all of its products are PFC-free by 2020.

So that future generations can keep exploring our wonderful world together with Deuter.

For more information, visit our web pages:
www.deuter.com/responsibility

Deuter has developed different systems specifically adapted to the various sports and their specific demands.

HIKING | TREKKING

On small to medium backpacks that are at home in easier terrain we go for maximum ventilation. The heart of the Aircomfort systems – tested and proven for decades – is its flexible spring steel frame. It is extremely durable, provides stable tension for the airy back mesh and creates the ventilation space between pack and wearer's back for the moist, warm air to dissipate. 1984 Deuter invented & patented the first mesh back system worldwide.

THE RESULT:

Up to 25 % less perspiration thanks to the maximum ventilation achieved by the Aircomfort mesh construction. This reduces circulatory stress for more endurance – tested and proven by the renowned Research Institute Hohenstein.

TREKKING | HIKING

The easiest way to carry heavy loads is when backpack and wearer become one. This is what our Aircontact principle is all about: the body contact system brings the weight close to the body and therefore close to the center of gravity. This results in full pack control and an effective load transfer. Furthermore, our Aircontact cushions made from special hollow chamber foam guarantee fantastic ventilation due to the pump effect of every movement.

THE RESULT:

Up to 15 % less perspiration as with a standard compact back system (proven in tests conducted by Gabriel L.&T and the University of Erlangen) – combined with outstanding load transfer and a secure, perfectly balanced fit.

BIKE | DAYPACK

A bike pack always has to sit secure and snug on your back – even on the roughest rides. Our unique Airstripes System takes care of that and offers effective ventilation. It consists of two contoured, air-channelled foam profiles that are covered with a highly breathable Wide AirMesh lining. The reduced contact surface results in an optimized fresh air circulation. Also, the pack's load is kept close to the body and thus won't throw the rider off balance.

THE RESULT:

The minimal contact surface area of the profiled Airstripes allows free air circulation over 80 % of the riders back, while still providing a secure, compact fit even on rough rides.

ALPINE

For alpine backpacks the combination of comfort, durability, functionality and low weight is essential. Deuter's Alpine System answers this challenge by focusing on a compact, secure yet comfortable fit with its two flexible softstripe back pads that are perfectly adapted to the anatomy and follow the wearer's movements. In combination with the pack's sleek shape this keeps the load always close to the centre of gravity – thus guaranteeing full pack control.

THE RESULT:

The Alpine back combines a secure, compact fit for full pack control and full focus on the terrain with a top carrying performance and a comfortable ventilation between the two softstripe back pads.

HIKING | ALPINE

Our lightweight backpacks come into their own during endurance sports and Alpine day treks. Reduced to the essential, they are ideal for comfortably carrying light to medium loads depending on the volume. However, lightness must never come at the expense of durability. That is and always was our corporate philosophy, because disposable products put a strain on the environment and a backpack that falls apart high up in the mountains can also be dangerous.

THE RESULT:

Our lightweights are designed for everyone who wants to travel light without forgoing carrying comfort and durability.

TRAVEL

The ergonomically shaped back cushions of the Contact System hug the back and distribute the weight of the load evenly, relieving the load on the back. Additionally, loads are carried easiest when they are close to the body. Channels between the cushions as well as the breathable, sturdy 3D Airmesh lining provide pleasant ventilation.

THE RESULT:

Ergonomically shaped Contact back cushions provide carrying comfort that relieves the back while keeping the weight of the load close to the body and distributing it evenly.

SL-COLLECTION

Female Specific Packs

DEUTER SL-Team

Deuter's product development team for the women's specific SL line consists of female designers and top athletes from all disciplines / sports. It's almost an occupational habit that our experts can never stand still. Since 2006 they are always pushing forward – also when it comes to developing products.

Our rucksacks are designed to fit the average athletic build. However, since not everyone fits the norm it is likely that women's models will fit many male users perfectly well, and vice versa.

SHORTER BACK

Women usually have a shorter back than men. Our SL carrying systems are adapted to the female anatomy and therefore shorter.

SLIM-CUT SHOULDER STRAPS

The SL shoulder straps have a distinct S-shape and all-round soft edges. In addition the straps become slimmer towards their ends. For a perfect fit around the shoulder area - no pinching or chaffing. The shoulder straps lie closer together and are adapted to slimmer female shoulders.

CONICAL HIP-FINS

The closed SL hip belt forms a cone to perfectly adapt to the female anatomy. The conical shape is the result of the the ends of the hipbelt coming together in an upward direction and the anatomically adapted design for the SL hip fins. The hip fins perfectly hug the female hips.

THE DEUTER EXTRA LONG SERIES

Tall people can enjoy a perfect fit with our Extra Long EL-models! Taller sportsmen and -women between 1.85 – 2 m often have difficulty finding backpacks that fit their longer backs. Our favourite Deuter backpack models are available to suit taller people with extended back lengths by 6-9 cm. Overall, backpacks in the Extra Long (EL) series have also grown in terms of volume. Back systems, features and details remain the same in the EL models as they are in the standard models, however.

MY DEUTER IS MY

Companion

„Being in the mountains means experiencing special moments and sharing them with like-minded people. You keep going higher, the view gets more beautiful with every step you take, you feel nature and yourself. Having a good time with friends means a lot to me. It doesn't matter if I'm climbing, mountaineering, mountain biking or ski mountaineering: to me it means experiencing freedom and independence. I always feel good with Deuter's backpacks. Being part of the SL-Family I know that they keep improving their packs in cooperation with athletes and their requirements in mind. To me Deuter is innovative, dynamic and always state-of-the-art.“

KATHRIN WEBER is part of the Deuter SL-Family and contributes to the further development of the ladies backpacks. Aside from her sports and biology studies she is also majoring in health and performance sports. She is a specialised trainer for mountaineering and skiing. The feeling of freedom in the mountains is what draws the all-round mountaineer to them year-round.

Aircontact Pro Series

A large trekking backpack with a well-ventilated back that's extremely comfortable to carry and offers superior mobility.

EASY-ACCESS DRINKS AND SNACKS

thanks to a new stretch holster pocket at the side with press stud closure to keep contents in place.

- Material: 330 D PA 6.6 Ripstop / 600 D PES

NEW

Aircontact Pro System

SUPERIOR CARRY COMFORT:

thanks to the flexible ActiveFit shoulder straps that mould to the shape of the individual.

EXCELLENT VENTILATION

thanks to open cell foam padding.

The back system promotes air exchange with every move. The result: 15% less perspiration than a conventional carry system. *

EASY TO CARRY WITH FULL MOBILITY

thanks to highly effective load transfer. A V-shaped inner frame connects the shoulder straps to the VariFlex ECL hip fins, effectively distributing the load. The frame transfers up to 70% of the load onto the hip fins. This ensures the upper body and hips retain full mobility. The Aircontact Pro back system is designed for loads of up to 30kg.

THE PERFECT FIT FOR ANY BACK LENGTH

provides the new stepless VariSlide adjustment system quickly and easily at the flick of a buckle.

*proven in a field test conducted by Gabriel L.&T. in co-operation with the University of Erlangen/Germany

MY DEUTER IS MY

Guide

“During the summer, I spend most of my time in the mountains: trail running, mountaineering or climbing. I like to keep it varied and exciting otherwise I get bored. My absolute mountain highlights to date have been climbing the north face of the Eiger, and our Peru expedition that included a traverse of the Taulliraju range. I want to train as a mountain and ski guide, to help other people also have amazing experiences in the mountains, in safety.”

For **FINN KOCH** variety is the spice of life — particularly when he has an ultra-light mountain pack on his back, like the new Guide Lite.

NEW

Guide Lite Series

For ambitious mountain sports enthusiasts, looking for an ultra-lightweight, minimalist pack with clear and simple functionality for maximum mountain focus.

HELMET STOWS EASILY

with the integrated helmet holder that allows you to securely stash your helmet on the outside of the pack, snug against your back.

Guide Lite 30+

Details Guide Lite: 28 SL, 32

lightweight

load adjustment straps

detachable, height-adjustable
lid pocket

internal valuables pocket

3-point ice axe attachment

adjustable sternum strap
with safety whistle

- extendable pack volume
- stowable, detachable rope strap
- gear loops
- Material: 100D PA High Tenacity / 630D PA

NEW

Lite System

LIGHT AND COMFORTABLE

to carry thanks to supple, ergonomic hip fins. The hip fins, hip belt and lid compartment can all be detached to cut down weight.

Total weight reduction:
260 g

SECURE

with the new Lite back system designed for alpine terrain that's pared down to the essentials and creates a snug, secure fit on the back. The new style shoulder straps flex and bend with your every move, so you won't be thrown off balance even through challenging, dynamic sections.

MY DEUTER IS MY

Flow

"I love exploring new areas aside from my home turf. I feel especially at home in mountain regions and take on quite some effort to meet and experience new cultures, people, and of course unique trails. I enjoy sharing my experiences on the mountain with like-minded people and I make a conscious effort to take in nature. Of course I look forward to the reward after the challenge: the ride down a beautiful trail. To me Deuter is a brand with a strong sense of connection to home. I'm also stoked about their proximity to the people. The folks at Deuter represent and convey the feeling of the outdoors combined with quality you can trust."

JAKOB BREITWIESER has been participating in Enduro races throughout Europe for years but rather just for fun. He loves to explore trails in unknown bike territories and passing on his passion to the next MTB generation as a teacher and guide.

NEW

Trans Alpine Series

A touring pack for multi-day bike trips with a solid fit and well ventilated back, plus a host of clever stow options.

HELMET STOWS EASILY

with all compartments still accessible. Fixing the helmet holder with simple attachment clips keeps your helmet out of the way when loading the pack.

NEW

Airstripes System

deuter
AIRSTripES

COMFORTABLE SECURE FIT

through adjustable ActiveFit shoulder straps and the adaptable aluminium frame for an ergonomic fit.

VENTILATED BACK

thanks to the Airstripes back system with reduced contact surface for maximum air circulation across the back. Pull-Forward adjusters compress the base of the load and create a compact, snug fit at the same time.

QUICK PUMP ACCESS

with a dedicated bicycle pump compartment, so you can have that flat tyre inflated in no time at all.

- Material: 210D PA / 600D PES

CLIMBER

EASY, SECURE CARRY

made possible by the Alpine back system adapted for children: The fit is snug and secure, and flexes with the natural movement of the child's body. This results in effective load control and maximum mobility. Compact hip fins distribute the load evenly.

EXTRA ATTACHMENT OPTIONS:
with gear loops on the hip fins.

NEW

Climber

The Climber backpack offers children aged 6+ a secure fit with maximum mobility for tackling alpine terrain.

KC SUN ROOF
3690219 | 4014 graphite
160 g

Kid Comfort Accessory

The flexible and durable sun roof is securely attached to the Deuter child carrier with buckles. The sun roof protects the child from UV-rays and provides pleasant shade. Easy to stow thanks to its flexible construction.

Fits the Kid Comfort Active, Kid Comfort Active SL, Kid Comfort.

KC RAIN COVER DELUXE
3690319 | 2004 kiwi
165 g

Kid Comfort Accessory

The complete rain and wind protection for the child carriers. Fits all child carriers with a sun roof.

KC CHIN PAD
3690419 | 4003 grey
150 g

Kid Comfort Accessory

Our child carriers can be upgraded with the large, ergonomic pillow. It protects the tired child's head and gives support even in the corners of the cockpit, enabling a relaxing nap. The soft pillow and the removable cover are washable and easy to remove. The press-stud attachment fits all current Kid Comfort models.

KC FOOT LOOPS
3690019 | 4014 graphite

Kid Comfort Accessory

The height-adjustable foot loops for our child carriers are also available separately. They are now adjustable to accommodate different foot and shoe sizes.

For mountaineers and ambitious trekkers who depend on maximum heat insulation and minimal weight on extreme tours.

Astro Pro: 400, 600, 800, 1000

Trapezoidal chamber design prevents the formation of cold spots

quick heating and comfortable sleep thanks to a snug inner shell that can expand by up to 25% in width

always well-insulated thanks to the innovative PowerBox design: a unique combination of longitudinal chambers

the head is always warmly wrapped up inside the functional ThermoHood with five (Astro Pro 400 & 600) or seven (Astro Pro 800 & 1000) chambers for keeping the down in position; features different draw cords for easy handling

ErgoFoot keeps feet cosy and warm as the down is held firmly inside the chambers

warmth collar

water-repelling Dryzone fabric in the head and foot area protects against damp

inside pocket

• top heat-to-weight ratio and packing dimensions

• heat collar with hook and loop closure and elastic cord

• anti-jamming zip strip top and bottom

• the SL ladies' models have more filling to create extra heat reserves

- "bluesign® product" with high-quality, RDS-certified down
- compression packsack and delivered in an additional storage packsack
- perfect for alpinists – both inside a tent under a starlit sky
- Filling: 650+ cuin / 90/10 RDS
Inner shell: 30D PA
Outer shell: 30D PA Ripstop

Our manufacturing process well as the quality of the textiles we use ensures the long-time durability and longevity of our products. The materials we use are adapted to their future use as backpack textiles and produced especially for Deuter. Performance, Deuter's standards, and their safety for consumers are regularly tested in labs and are therefore assured.

The majority of the raw material we use in our textiles is polyester (PES) and polyamide (PA). They handle well due to their properties and they are robust and tearproof. The outer fabrics we use, especially our rain covers, are water resistant. This provides ideal traits of products that are intensively used outside like our backpacks and sleeping bags.

All our textiles are coated on the inside, making the respective material more durable, more water repellent, and the seams more stable. The consistency and strength of this polyurethane coating (PU) varies depending on its future use. The outside of our textiles is treated with a DWR (Durable Water Repellent) coat to obtain a high level of water and dirt repellent properties. We either use short-chain PFC coats (C6) and more and more PFC free finishings depending on the future use and aspects of sustainability.

We use textiles in differing strengths to make sure our products fulfil their respective function. We state these in denier (D). This measurement unit is established in the outdoor market and has lead to comparability within our own collection. It goes back to the old French unit of weight also called denier. This means that 1D = 1 gramme per 9000 meters of yarn. The lower the number in front of the "D" the thinner the respective textile. Our unit therefore describes fabrics that range from very sturdy and durable to extremely light textiles.

However, the durability and strength of a textile cannot only be taken from its denier number. The weave, structure, and application-oriented mix of raw materials also plays a role. The finishing of the yarn before the weaving process also has a decisive impact. We also state relevant equipment and features. Weaving in stronger threads or reinforced structures can make thinner material more durable and more stable. We call this feature "Ripstop" for example. If other processed or surface-finished yarns are used then the product is labelled with "high tenacity".

YKK® zippers: The most high-quality zippers available on the market are absolutely robust and reliable.

Multi-chamber aluminium profile rails: The weight-bearing elements of our backpacks are made from high-quality aluminium. This makes them durable and light at the same time. Its special constructions makes it possible to combine these two traits. A flat aluminium rail is separated into several different chambers by internal partitions. The cross sections shows a hive-like structure that provides stability. The multi-chamber aluminium profile rails are used in differing widths depending on the model of the backpack.

Permanently elastic spring steel frames: Spring steel is incredibly durable and elastic. It springs back into form again and again nearly unbreakable after being deformed. A round profile allows a very flexible construction of the frame. A flat profile provides a frame with extremely high form stability. Both give our Aircomfort models with its patented ventilation a permanently stable tension of the back net.

Our upper materials and filling for sleeping bags are made of polyamide and also polyester for the most part. We predominantly process textiles with low deniers. These are also often structured. The fabrics are light and at the same time very durable and always moisture repellent. PFC free materials are increasingly being used. In addition we also make sure to use breathable materials to ensure pleasant sleeping conditions.

Fabric in the so-called Dryzones is especially processed and enables a high water column. The sleeping bag stays comfortably dry.

Our fillings are also light and comfortable. Good insulation properties and breathability are necessary requirements for the materials that we use in our products.

Some of our sleeping bags used brushed materials like the Brushed Thermo Fleece. The light and very high-quality polyester fleece feels soft and cozy to the skin due to its fluffy brushed surface. The material offers an excellent warmth-weight ration. Furthermore it is highly breathable, long-lasting, and easy to clean. Its

short drying time is another benefit. Its high level of elasticity supports freedom of movement of the Thermo-Stretch-Comfort-construction in our Exosphere SL models. It also keeps warm in the Orbit SL models.

FILLING SLEEPING BAG

Synthetic

High-Loft Hollowfiber: Synthetic hollow fibres are processed to a filling fleece (by thermal bonding). To ensure good compression and high loft, silicone is added. Remarkable insulation rating, tear resistant and durable.

Thermo ProLoft®: A special thermal process turns Polyester fibres into top quality technical Thermo ProLoft® insulating fleece. The combination of dense and hollow fibres results in the perfect blend between durability, weight and warmth properties – a fleece material that is easy care and durable yet compact and offers excellent insulation at minimal weight. The synthetic fibres also absorb very little moisture. Short drying times, excellent loft and thus insulation properties even when damp, are all advantageous characteristics. Deuter Thermo ProLoft® is also coated with a thin layer of silicone to give it good lofting properties.

Combining: Deuter sleeping bags Orbit, Exosphere and Space can be zipped together. Use left-hand zip and right-hand zip versions when combining.

Down

Since June 2005 we only use down feathers certified in accordance with the Responsible Down Standard (RDS) – benefits: no live plucking, no force feeding, supply chain traceability, animal welfare guaranteed at every stage and verification by independent certification institutes around the world.

Composition: The deciding factor in a down sleeping bag is the down quality. Primarily this is a matter of the weight ratio of down to small feather mixture, which is expressed in percent. Deuter uses only the high performance filling ratio of 90% down to 10% small feather (90/10).

Fill power / cuin: High quality sleeping bags should have a fill power of at least 650 cuin (cubic inches). This measurement in cubic inches per ounce of down shows the quality of the bulking and expansion power of the filling. High quality down has a bulking volume of 650 cuin (10.6 litres) per 1 ounce (28.3g). A bulking power of 550 cuin, and higher is good; of 650 - excellent; and 800 is almost impossible. In the end: the higher the volume the better the insulation value.
