NEW

WHAT'S NEW?

BREAKING NEW GROUND WITH INNOVATIVE PRODUCT SOLUTIONS

We've always used our customers' wishes as a source of inspiration. For more than 120 years we've successfully translated these into high quality, durable, sustainable products. This season,

we've again proven that the cornerstone of what we do is wear comfort combined with targeted functionality for product solutions that reach new target audiences.

NEW AVALANCHE BACKPACK SERIES -THE PINNACLE OF SAFETY AND COMFORT

In recent years, there's been a real boom in mountain sports that take us away from the crowds, like freeriding or ski touring. We've responded to this increased demand by extending our snow sports portfolio and teaming up with a highly reputable avalanche airbag manufacturer, Alpride, to bring a new avalanche backpack onto the market. We've cleverly combined the wear comfort and high-quality materials and craftsmanship that deuter is known for, with Alpride's reliable Swiss engineering, to introduce a new generation of avalanche backpacks in the form of the Alproof and Alproof Lite.

DEUTER TRAINING GOES DIGITAL

GET THE FACTS DIGITAL

deuter's retail training now includes eLearning - a smart way of increasing product knowledge for the whole team.

And it's mobile too. So you can stay up to date with everything deuter-related, or quickly bring new employees up to speed. Because the more knowledge you have, the more we all benefit.

CSR "NEWS"

WE WANT TO PROTECT WHAT WE LOVE FOR FUTURE GENERATIONS

Which is why we incorporate responsibility toward our fellow humans and nature into our daily business practices. For years we've created innovative, durable, high-quality products with the aim of ensuring they have the longest possible lifespan. But there's no time for complacency. There's still a lot of work to do. Because sustainability is not a goal that can be achieved, but a process that needs constant reassessment and new approaches.

TAKING STEPS TOWARD GREATER SUSTAINABILITY.

1. MORE BLUESIGN® CERTIFIED PRODUCTS

As part of the bluesign® system, we work with our suppliers and manufacturers to create more resource-efficient and environmentally friendly products and production processes. By 2025, we plan to increase the number of bluesign® products in our collection (currently 19%), and reach a minimum of 70% sustainably-made, bluesign®-certified main materials (fabrics). It might sound simple. But the reality is more complex. Because unlike a T-shirt, which can be made from just a couple of pieces of fabric sewn together, a backpack is made from anything up to 250 individual parts, and which are sourced from a wide range of suppliers. For a finished product to carry the bluesign® product label, at least 90% of the textiles and 20% of the components must be proven to be made according to the bluesign® standard, and therefore originate from tested, certifiable manufacturing.

The UP Seoul consists of 143 individual parts

2. COMPENSATION MEASURES FOR CLIMATE NEUTRALITY

By adopting more materials and technologies that have a smaller carbon footprint in our collections we are taking positive steps toward reducing our CO2 emissions. But despite our greatest efforts, it's impossible to make products climate neutral. And so, we've teamed up with Climate Partner to offset any unavoidable CO2 emissions. From now on, the volume of emissions released by the production and transport of any product purchased from the Pico, Kikki, Junior, Step Out, Overday and Overnite series, will be compensated for through voluntary offsetting and targeted investment in select social and climate protection projects. This year, we have already offset all our emissions from our headquarters. We've achieved this by taking buildings and infrastructure measures to reduce our CO2 footprint and have supported the following projects which we selected through our links with Climate Partner: Solar power in Outapi, Namibia and Forest protection in the Kasigau Wildlife Corridor, Kenya.

3. GERMAN GOVERNMENT LABEL FOR GREATER CONSUMER ASSURANCE

Our efforts with the bluesign® system have also helped us attain Green Button (Grüner Knopf) certification. To bear this international hallmark for sustainable textiles, which was initiated by the German government, products must be manufactured in line with strict environmental and social standards as laid out by the government. The Green Button logo indicates to consumers that they are buying sustainable textiles. From August 2021, all of our bluesign® certified products now automatically bear the Green Button seal.

The Grüner Knopf is an initiative of Alliance for sustainable textiles.

deuter wins the 2022 German Sustainability Award for Global Corporate Partnerships with its partner Vina Duke and is granted FWF Leader Status for the 9th time in a row.

The Sustainability Award is the most prestigious award in Germany and the largest in Europe for ecological and social commitment.

OUR PLEDGE

Business has to operate in harmony with people and the natural world. It's this basic sustainability principle that underpins our whole corporate philosophy. We call it 'Together for 360° Responsibility'. Together, we want to adopt responsible practices with the aim of preserving natural and man-made resources to make sure we tread as lightly as possible. But it takes more than a few token gestures to make this a reality. The deuter Promise is bigger than that.

Under the slogan "Changing for the better means taking responsibility" we have committed to clear, multidisciplinary measures with transparent, quantifiable goals and a holistic, all-encompassing approach to doing business sustainably. It may not be the easiest path. And it's certainly not the most direct one. But we're convinced that it will reap greater sustainability.

We've set ourselves fixed goals. And we are constantly driving them forward across all areas of the business. They incorporate all the key aspects: the environment and climate, animal welfare, social justice and social welfare – and of course, our customers.

WE TAKE OUR RESPONSIBILITY SERIOUSLY

At the heart of our sustainability strategy lies our responsibility for people and planet. Responsibility toward our customers and our employees means offering our customers durable, high-quality products and ensuring fair working conditions for our employees, who work hard to create these products. That responsibility reaches beyond our company to the society in which we live. And beyond that, to nature itself. The planet we live on is our only source of food, water, oxygen and precious resources. It also offers uniquely beautiful places that provide us all - not just outdoor enthusiasts - with a fascinating range of ecosystems and environments that energize and sustain us.

Responsibility is at the heart of everything we do and woven into the fabric of who we are.

TOGETHER WE ARE STRONGER

Each and every one of us has a part to play, a contribution to make. But together, we are greater than the sum of our parts. And that's why we work closely with our longstanding partners in manufacturing and design, recruit further partners with specialist skills and knowledge, and measure our efforts against the highest standards. Because sustainability isn't just a corporate vision, it's a philosophy that guides all our daily actions.

RESPONSIBILITY

WE MANUFACTURE ACCORDING TO BLUESIGN® STANDARDS, TO PROTECT PEOPLE AND PLANET

Even the most conscientiously made outdoor equipment creates an ecological footprint. At deuter, we want to keep that footprint as small and light as possible.

That's why we have adopted the bluesign® system - the world's strictest standard for environmental protection, occupational safety and consumer protection in the textile industry - to guide us in our production. By using

the bluesign® system, which deuter adopted in 2008, we aim to make our products and the entire production cycle progressively more resource efficient and more environmentally friendly. And we're improving all the time. 100% of our manufacturing partners are bluesign® system partners and the number of bluesign® products in our collection is steadily rising: It currently includes the Heritage series, Astro series, UP series, Kikki, Urban Belts, Cotogy and Scula.

FAIRNESS FROM A TO Z - WITH THE FAIR WEAR FOUNDATION

We're celebrating a small anniversary – ten years' membership of the Fair Wear Foundation (FWF). It's a milestone in our efforts to achieve fair working conditions throughout the entire production and supply chain. The FWF is a multi-stakeholder initiative that works together with companies and factories

to improve working conditions in textile and garment factories, particularly on the ground in production countries. Recognition of our efforts, which include focusing on just two manufacturing partners, shows us we're on the right path. We've earned FWF Leader Status every year since 2013 and received the FWF Best Practice award in 2015.

PARTNERSHIP FOR SUSTAINABLE TEXTILES – UNITED FOR GREATER SUSTAINABILITY

We want to make outdoor equipment in an environmentally friendly, sustainable way, under fair conditions and within socially responsible manufacturing and supply chains. These chains are long and complex, and often hard for one company alone to clearly assess. That's why we have teamed up with other manufacturing partners and businesses

through our membership of the Bündnis für nachhaltige Textilen (Partnership for Sustainable Textiles). Our aim is to improve the social, environmental and economic conditions along the whole supply chain. The Partnership for Sustainable Textiles was set up in 2014 by the German government and brings together stakeholders from business, civil society, standards organizations and trade unions under one umbrella.

GREEN BUTTON FOR GREEN PRODUCTS

Policymakers have also recognized that textile manufacturing cannot become more sustainable without cross-border standards. deuter is collaborating with the international "Green Button" (Grüner Knopf) hallmark initiated by the German government. It is the world's first state-supervised certifi-

cation mark to establish compliance standards for sustainably produced textiles. This global seal of approval sets mandatory requirements to protect people and the environment. A total of 46 stringent social and environmental standards must be met, such as wastewater limits and the prohibition of forced labor.

RESPONSIBLE DOWN STANDARD -FOR THE LOVE OF ANIMALS

Even sustainable natural materials have to be produced in an environmentally sound way. That is why, since 2015, we've exclusively used high-quality feathers that are Responsible Down Standard (RDS)

certified for all of our down sleeping bags. In order to obtain RDS certification, animal welfare and farming practices have to be traceable throughout the entire production chain and meet the strictest requirements – from fledgling all the way through to finished sleeping bag.

SUSTAINABLE DEVELOPMENT GOALS

Can you imagine a world without poverty or famine? Fewer natural disasters and diminished impact from climate change? A world where humans and animals are less vulnerable? It's a worthwhile ambition, but one that's only possible if we all pull together. In 2015, member states of the United Nations ad-

10

opted the 2030 Agenda, which serves as a comprehensive roadmap to a peaceful, sustainable and prosperous world for us all. It's built around 17 Sustainable Development Goals (SDGs). We have joined this collective group and use the SDGs to guide us in shaping our 'deuter promise' agenda.

OUR OWN INITIATIVES

We are especially proud of the sustainability initiatives that we have undertaken ourselves and which we have already been successfully implementing for some time. These are further grist for the mill in realizing our vision and our holistic, fully integrated road to sustainable business practices.

WATERPROOFING THAT DOESN'T COST THE EARTH - PFC FREE SINCE 2020

Traces of PFCs are everywhere - in drinking water, breast milk, and the air we breathe - and they can even affect reproduction. These harmful fluorocarbons also degrade slowly, if at all, over time. They're a ticking time bomb for humans, animals and the environment We have eliminated PFCs from our DWR (Durable Water Repellency) since the start of 2020, while still maintaining the highest performance in repelling dirt and water from our products. This new coating, which is environmentally friendly and not harmful to human or animal health, brings us one step closer to our goal of conducting our business more responsibly and sustainably.

MUTUAL TRUST IS GOOD. LONG-TERM COOPERATION IS EVEN BETTER.

Fair and cooperative partnerships and an understanding of the shared responsibility of all parties involved are the foundations for stable global supply chains. By using just two long-standing, trusted manufacturing partners we are able, on the one hand, to guarantee the high quality and durability of our products. And on the other hand, we are able to ensure that all parties adopt fair working conditions, and that manufacturing processes are sustainable and resource efficient. Duke, Vietnam, has exclusively manufactured all of our backpacks, bags and accessories for us since 1991. Our sleeping bags have been made in China and Myanmar by our partner Bellmart since 2013.

STITCHING UP OUR FUTURE -DEUTER'S REPAIR SERVICE

However well you look after a product, at some stage, it will start to show signs of wear and tear. For us, there is no doubt that mending gear is better than throwing it away. And that's not just because we have some real miracle workers in our repairs department, but because providing a lifetime repair service also increases the lifespan of a product, which in turn saves resources.

In 2020 alone, we carried out 3,307 repair jobs, which equates to 13 per working day. We're really proud of

Find out more at: www.deuter.com/responsibility

deuter has developed different systems specifically adapted to the various sports and their specific demands.

The easiest way to carry heavy loads

is when backpack and wearer beco-

me one. This is what our Aircontact

principle is all about: the body cont-

the body and therefore close to the

center of gravity. This results in full

pack control and an effective load

transfer. Furthermore, our Aircontact

cushions made from special hollow

chamber foam guarantee fantastic

ventilation due to the pump effect of

act system brings the weight close to

THE RESULT:

every movement.

Up to 25 % less perspiration thanks to the maximum ventilation achieved by the Aircomfort mesh construction. This reduces circulatory stress for more endurance - tested and proven by the renowned Research Institute Hohenstein.

THE RESULT:

Up to 15 % less perspiration as with a standard compact back system (proven in tests conducted by Gabriel L.&T and the University of Erlangen) combined with outstanding load transfer and a secure, perfectly balanced fit.

12

A bike pack always has to sit secure and snug on your back - even on the roughest rides. Our unique Airstripes System takes care of that and offers effective ventilation. It consists of two contoured, air-channelled foam profiles that are covered with a highly breathable Wide AirMesh lining. The reduced contact surface results in an optimized fresh air circulation. Also, the pack's load is kept close to the body and thus won't throw the rider off balance.

THE RESULT:

The minimal contact surface area of the profiled Airstripes allows free air circulation over 80 % of the riders back, while still providing a secure, compact fit even on rough rides.

deuter

The ergonomically shaped back cus-

hions of the Contact System hug the

back and distribute the weight of the

load evenly, relieving the load on the

back. Additionally, loads are carried

easiest when they are close to the

body. Channels between the cus-

hions as well the breathable, sturdy

3D Airmesh lining provide pleasant

For alpine backpacks the combination of comfort, durability, functionality and low weight is essential. deuter's Alpine System answers this challenge by focusing on a compact, secure yet comfortable fit with its two flexible softstripe back pads that are perfectly adapted to the anatomy and follow the wearer's movements. In combination with the pack's sleek shape this keeps the load always close to the centre of gravity - thus guaranteeing full pack control.

THE RESULT:

The Alpine back combines a secure, compact fit for full pack control and full focus on the terrain with a top carrying performance and a comfortable ventilation between the two softstripe back pads.

Our lightweight backpacks come into their own during endurance sports and Alpine day treks. Reduced to the essential, they are ideal for comfortably carrying light to medium loads depending on the volume. However, lightness must never come at the expense of durability. That is and always was our corporate philosophy, bevause disposable products put a strain on the environment and a backpack that falls apart high up in the mountains can also be dangerous.

THE RESULT:

Our lightweights are designed for everyone who wants to travel light without forgoing carrying comfort and durability.

THE RESULT:

Ergonomically shaped Contact back cushions provide carrying comfort that relieves the back while keeping the weight of the load close to the body and distributing it evenly.

SL-COLLECTION

Female specific packs

deuter SL-Team

deuter's product development team for the women's specific SL line consists of female designers and top athletes from all disciplines / sports. It's almost an occupational habit that our experts can never stand still. Since 2006 they are always pushing forward – also when it comes to developing products.

Our rucksacks are designed to fit the average athletic build. However, since not everyone fits the norm it is likely that women's models will fit many male users perfectly well, and vice versa.

Glga EL

SL

SHORTER BACK

Women usually have a shorter back than men.
Our SL carrying systems are adapted to the
female anatomy and therefore shorter.

SLIM-CUT SHOULDER STRAPS

The SL shoulder straps have a distinct S-shape and all-round soft edges. In addition the straps become slimmer towards their ends. For a perfect fit around the shoulder area - no pinching or chaffing. The shoulder straps lie closer together and are adapted to slimmer female shoulders.

CONICAL HIP-FINS

The closed SL hip belt forms a cone to perfectly adapt to the female anatomy. The conical shape is the result of the the ends of the hipbelt coming together in an upward direction and the anatomically adapted design for the SL hip fins. The hip fins perfectly hug the female hips.

Standard Fit

Standard Fit

THE DEUTER EXTRA LONG SERIES

Tall people can enjoy a perfect fit with our Extra Long EL-models! Taller sportsmen and -women between 1.85 - 2 m often have difficulty finding backpacks that fit their longer backs. Our favourite deuter backpack models are available to suit taller people with extended back lengths by 6-9 cm. Overall, backpacks in the Extra Long (EL) series have also grown in terms of volume. Back systems, features and details remain the same in the EL models as they are in the standard models, however.

Our manufacturing process well as the quality of the textiles we use ensures the long-time durability and longevity of our products. The materials we use are adapted to their future use as backpack textiles and produced especially for deuter. Performance, deuter's standards, and their safety for consumers are regularly tested in labs and are therefore assured.

The majority of the raw material we use in our textiles is polyester (PES) and polyamide (PA). They handle well due to their properties and they are robust and tearproof. The outer fabrics we use, especially our rain covers, are water resistant. This provides ideal traits of products that are intensively used outside like our backpacks and sleeping bags.

All our textiles are coated on the inside, making the respective material more durable, more water repellent, and the seams more stable. The consistency and strength of this polyure-thane coating (PU) varies depending on its future use. The outside of our textiles is treated with a DWR (Durable Water Repellent) coat to obtain a high level of water and dirt repellent properties. We only use PFC free finishings.

We use textiles in differing strengths to make sure our products fulfil their respective function. We state these in denier (D). This measurement unit is established in the outdoor market and has lead to comparability within our own collection. It goes back to the old French unit of weight also called denier. This means that 1D = 1 gramme per 9000 meters of yarn. The lower the number in front of the "D" the thinner the respective textile. Our unit therefore describes fabrics that range from very sturdy and durable to extremely light textiles.

However, the durability and strength of a textile cannot only be taken from its denier number. The weave, structure,

and application-oriented mix of raw materials also plays a role. The finishing of the yarn before the weaving process also has a decisive impact. We also state relevant equipment and features. Weaving in stronger threads or reinforced structures can make thinner material more durable and more stable. We call this feature "Ripstop" for example. If other processed or surface-finished yarns are used then the product is labelled with "high tenacity".

YKK® zippers: The most high-quality zippers available on the market are absolutely robust and reliable.

Multi-chamber aluminium profile rails: The weight-bearing elements of our backpacks are made from high-quality aluminium. This makes them durable and light at the same time. Its special constructions makes it possible to combine these two traits. A flat aluminium rail is separated into several different chambers by internal partitions. The cross sections shows a hive-like structure that provides stability. The multi-chamber aluminium profile rails are used in differing widths depending on the model of the backpack.

Permanently elastic spring steel frames: Spring steel is incredibly durable and elastic. It springs back into form again and again nearly unbreakable after being deformed. A round profile allows a very flexible construction of the frame. A flat profile provides a frame with extremely high form stability. Both give our Aircomfort models with its patented ventilation a permanently stable tension of the back net.

Our upper materials and filling for sleeping bags are made of polyamide and also polyester for the most part. We predominantly process textiles with low deniers. These are also often structured. The fabrics are light and at the same time very durable and always moisture repellent. PFC free materials are increasingly being used. In addition we also make sure to use breathable materials to ensure pleasant sleeping conditions.

Fabric in the so-called Dryzones is especially processed and enables a high water column. The sleeping bag stays comfortably dry.

Our fillings are also light and comfortable. Good insulation properties and breathability are necessary requirements for the materials that we use in our products.

Some of our sleeping bags used brushed materials like the Brushed Thermo Fleece. The light and very high-quality polyester fleece feels soft and cozy to the skin due to its fluffy brushed surface. The material offers an excellent warmthweight ration. Furthermore it is highly breathable, long-lasting, and easy to clean. Its short drying time is another benefit. Its high level of elasticity supports freedom of movement of

the Thermo-Stretch-Comfort-construction in our Exosphere SL models. It also keeps warm in the Orbit SL models.

FILLING SLEEPING BAG

Synthetic

High-Loft Hollowfiber: Synthetic hollow fibres are processed to a filling fleece (by thermal bonding). To ensure good compression and high loft, silicone is added. Remarkable insulation rating, tear resistant and durable.

Thermo ProLoft®: A special thermal process turns Polyester fibres into top quality technical Thermo ProLoft® insulating fleece. The combination of dense and hollow fibres results in the prefect blend between durability, weight and warmth properties – a fleece material that is easy care and durable yet compact and offers excellent insulation at minimal weight. The synthetic fibres also absorb very little moisture. Short drying times, excellent loft and thus insulation properties even when damp, are all advantageous characteristics. deuter Thermo ProLoft® is also coated with a thin layer of silicone to give it good lofting properties.

Combining: deuter sleeping bags Orbit, Exosphere and Space can be zipped together. Use left-hand zip and right-hand zip versions when combining.

Down

Since June 2005 we only use down feathers certified in accordance with the Responsible Down Standard (RDS) – benefits: no live plucking, no force feeding, supply chain traceability, animal welfare guaranteed at every stage and verification by independent certification institutes around the world.

Composition: The deciding factor in a down sleeping bag is the down quality. Primarily this is a matter of the weight ratio of down to small feather mixture, which is expressed in percent. deuter uses only the high performance filling ratio of 90% down to 10% small feather (90/10).

Fill power / cuin: High quality sleeping bags should have a fill power of at least 650 cuin (cubic inches). This measurement in cubic inches per ounce of down shows the quality of the bulking and expansion power of the filling. High quality down has a bulking volume of 650 cuin (10.6 litres) per 1 ounce (28.3g). A bulking power of 550 cuin, and higher is good; of 650 - excellent; and 800 is almost impossible. In the end: the higher the volume the better the insulation value.
